

What You Receive

Exactly what comes back from a diagnostic, and why each piece matters.

Reachability Labs · Diagnostics deliverables

You do not just get a score or a conversation. You get a compact package you can use to decide whether to **tune, redesign, escalate, or stop.**

What you get	What it tells you	Why it matters
Decision memo	The direct answer to your question, in plain language.	Lets you make a decision without translating technical detail for yourself.
Failure map	Where the process actually starts losing viable routes.	Tells you where to instrument, intervene, or stop looking.
Evidence packet	The small set of traces, tables, or figures needed to support the conclusion.	Shows why we reached the answer instead of asking you to take it on faith.
Action plan	What to change first, what to test next, and what not to spend time on yet.	Turns the diagnosis into an operating move, not just an explanation.

Optional add-ons

- technical appendix
- reproducibility or provenance appendix
- live review session
- follow-on scope for deeper work

Questions this package should answer

- Is the problem actually infeasible under current constraints?
- Or is the process losing good routes before visible failure?
- Where should you look first?
- What is the next rational move?

In one line

You receive a documented answer, the evidence behind it, and a clear next-step recommendation.
